Project: StoryCast Microsite.

Project Overview:

StoryCast is a small, three-page microsite designed to share stories about Rwanda in a simple and engaging way. It is easy to navigate and user-friendly, so visitors can find what they need without difficulty. The site is built with HTML for the structure and SCSS, a CSS preprocessor, for the styling.

The **Home** page introduces the site and highlights the featured stories, so users can quickly choose one to explore. The **Story** page lets users open a story of their choice and either watch the video or listen to the audio, with a transcript and related stories for further exploring. The **About** page explains the mission behind StoryCast and the accessibility features of the site, and guides users on how to access the stories and share them with others.
